

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows.

1.-48. (Canceled)

49. (Previously Presented) A method for detecting a redirection loop, comprising:
- receiving a first request to process a first web destination;
 - identifying a first redirection from the first web destination to a second web destination when processing the first request;
 - initiating tracking logic based on the first redirection;
 - receiving a subsequent request to process the first web destination;
 - identifying, using the tracking logic, a subsequent redirection from the first web destination to the second web destination when processing the subsequent request; and
 - incrementing a counter when the subsequent redirection from the first web destination to the second web destination occurs within a predefined time limit.
50. (Previously Presented) The method of claim 49, wherein the tracking logic identifies the first web destination and the second web destination.
51. (Previously Presented) The method of claim 49, wherein the predefined time limit is user configurable.
52. (Previously Presented) The method of claim 49, further comprising:
- detecting the redirection loop when the counter exceeds a predefined maximum number of redirections.
53. (Previously Presented) The method of claim 52, further comprising:
- terminating processing to the second web destination.
54. (Previously Presented) The method of claim 49, further comprising:
- resetting the counter when the predefined time limit elapses after any redirection from the first web destination to the second web destination.

- 55. (Previously Presented) The method of claim 49, wherein the counter is stored in a cookie.
- 56. (Previously Presented) The method of claim 49, wherein the tracking logic stores an identifier of the first web destination in a cookie.
- 57. (Previously Presented) The method of claim 49, wherein the first redirection is performed via at least one intermediate web destination.
- 58. (Previously Presented) The method of claim 49, wherein the tracking logic is connected to a web browser.
